

GENTLE TONSIL & ADENOID SURGERY

powered by the MYRAC Low-Temperature RF Plasma System

Designed to be tissue-friendly and precise such as:

Less pain | **Minimal bleeding** | **Faster recovery**

Why consider surgical care (after ENT evaluation)?

- Recurrent tonsillitis / sore throat
- Snoring, mouth-breathing, disturbed sleep (especially in children)
- Enlarged adenoids causing blocked nose or ear issues

How the MYRAC low-temperature RF plasma method works?

- Saline at the instrument tip forms a controlled plasma field
- Operates at relatively lower heat vs. traditional cautery
- Aims to selectively treat targeted tissue and help protect nearby healthy areas
- In suitable cases, this approach may reduce intra-operative bleeding and thermal injury, supporting a smoother recovery

What patients often experience?

Less throat pain after surgery

Minimal bleeding during/after

Short hospital stay in many cases

Faster recovery (case-dependent)

After-care

Diet

- Start with cold liquids—→soft foods (curd, khichdi, ice cream, soups cooled)
- Avoid hot, spicy, rough foods for a few days
- Hydration is key

Medicines

- Take exactly as prescribed (pain control/antibiotics if advised)
- Avoid unadvised OTC painkillers

Oral/Throat Care

- Mild mouth odour/white coating in the throat is common while healing
- Do not scratch or gargle harshly; gentle rinses only if advised

MYRAC – Cool Plasma Precision for Safer & Faster Recovery
